

Low-Cost, Single-Channel, 6th-Order HDTV Video Filter Driver**-----MS1681****PRODUCT DESCRIPTION**

The MS1681 is a video buffer which integrates Single 6dB Gain rail-to-rail output driver and 6th output reconstruction filter, it has 35MHz -3dB bandwidth and 160V/ μ s slew rate. MS1681 provides improved image quality compared with passive LC filters and discrete drivers solution. Operating from single supplies ranging from +2.5V to +5.5V and sinking an ultra-low 14.5mA quiescent current, the MS1681 is ideally suited for battery powered applications.

MS1681 can be DC-coupled or AC-coupled with input video signal, such as the output of DAC. Internal diode clamps and bias circuitry may be used if AC-coupled inputs are required. MS1681 also integrates an internal level shift circuit which avoids sync-pulse being clipped and allows DC-coupled output. The driver in MS1681 can drive DC or AC-coupled single (150 Ω) or dual (75 Ω) loads.

The MS1681 has lead SOT23-6 package and ESD (HBM) reaches 8KV.

FEATURES

- Single 3rd order 35MHz (HD) filter
- Transparent input clamping
- 6dB output driver Gain and drive dual video load
- Rail-to-Rail Output
- Input Voltage Range Includes Ground
- AC or DC Coupled Inputs
- AC or DC Coupled Outputs
- Operates from 2.5V to 5.5V Single power supply
- Low Power 14.5mA Supply Current
- Lead SOT23-6 package

APPLICATIONS

- Video On Demand (VOD)
- Cable and Satellite Set-top Boxes
- DVD Players
- HDTV and Projector
- Personal Video Recorders (PVR)
- Communications device
- Portable and handheld product

PACKAGE/ORDERING INFORMATION

PIN CONFIGURATIONS

1. Pin Description

Pin	Name	Function
1	PS	Shutdown Mode (active low)
2	OUT	Video output ,
3	NC	Floating pin
4	IN	Video input
5	GND	Ground
6	VCC	Power supply

CAUTION

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

ABSOLUTE MAXIMUM RATINGS

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied.

PARAMETER	MAXIMUM
Supply Voltage, V+ to V-	7.5V
Input Voltage	GND-0.3V to (+VS)+0.3V
Storage Temperature Range	-65°C to +150°C
Junction Temperature	160°C
Operating Temperature Range	-40°C to +125°C
Power Dissipation, PD @ TA = 25°C	0.8W
Package Thermal Resistance, θ_{JA}	128°C/W
Lead Temperature Range (Soldering 10 sec)	260°C
ESD Susceptibility HBM	8000V
MM	400V

TYPICAL PERFORMANCE CHARACTERISTICS

At $V_S = +5.0V$, $T_A = +25^\circ C$, $R_L = 150\Omega$, all outputs AC coupled with $220\mu F$, unless otherwise noted.

APPLICATIONS INFORMATION

Functional Description

MS1681 operates from a single +2.5V to +5V supply. In application, MS1681 is a fully integrated solution for filtering and buffering HDTV signals in front of video decoder or behind video encoder. MS1681's solution can help you save PCB size and production cost, it also improves video signal performance comparing with traditional design using discrete components. MS1681 features a DC-coupled input buffer, 3-pole low-pass filter to eliminate out-of-band noise of video encoder, and a gain of +6dB in the output amplifier to drive 75Ω load. The AC or DC-coupled input buffer eliminates sync crush, droop, and field tilt. The output of MS1681 also can be DC-coupled or AC-coupled.

Input Considerations

Besides AC coupling, the MS1681 inputs also can be DC-coupled. In DC coupling application, No input coupling capacitors are needed because the amplitude of input video signal from DAC includes ground and extends up to 1.4V, then MS1681 can be directly connected to the output of a single-supply, current-output DAC without any external bias network. Some time, if DAC's output level exceeds the range of 0V to 1.4V, or MS1681 is driven by an unknown external source or a SCART switch which has its own clamping circuit, AC coupling is needed in such application.

Output Considerations

The MS1681 outputs can be DC-coupled or AC-coupled. While 0V is input, the MS1681 output voltage is 260mV typically. In DC coupling design, one 75Ω resistor is used to Connect MS1681's output pin with external load directly, this serial back-termination resistor is used to match the impedance of the transmission line between MS1681 and external load to cancel the signal reflection. The MS1681 outputs can sink and source current allowing the device to be AC-coupled with external load, in AC coupling, 220μF at least capacitor will be used in order to cancel field tilt.

Power-Supply Bypassing and Layout

Correct power supply bypassing is very important for optimizing video performance in design. One 0.1μF and one 10μF capacitors are always used to Bypass VCC pin of MS1681, please place these two capacitors as close to the MS1681 output pin as possible, a large ground plane is also needed to ensure optimum performance. The input and output termination resistors should be placed as close to the related pin of MS1681 as possible to avoid performance degradation. The PCB traces at the output side should have 75Ω characteristic impedance in order to match the 75Ω characteristic impedance cable connecting external load. In design, please keep the board trace at the inputs and outputs of the MS1681 as short as possible to minimize the parasitic stray capacitance and noise pickup.

Typical Application Diagram

The following schematic in Figure 15 is normally used for AC coupled output and DC-coupled input with DAC which has an output voltage range of 0V to 1.4V. AC coupled output offer slightly lower power dissipation and high ESD protection ability. The schematics in Figure 14 are also popular in design. Figure 16 is a kind of special application in STB.
