

## Single Channel Video Operational Amplifier and Coaxial Control Decoder

### PRODUCT DESCRIPTION

The MS7337M integrates single-channel video amplifier and video coaxial control decoder. Video amplifier integrates rail-to-rail output driver with 6dB gain and 6th order filter. The -3dB bandwidth is up to 81MHz. The video coaxial control decoder integrates high-speed processor to effectively separate mixed signal.

The single power supply ranges from +2.7V to +5.5V and operating current is 36mA, which is ideally suited for battery-powered applications.

MSOP8

### FEATURES

- Single Channel, 81MHz, 6th Order (FHD) Filter
- Transparent Sync-tip Input Clamp
- 6dB Gain Output Driver and Drive Dual Video Load
- Rail-to-Rail Output
- Input Voltage Range Includes Ground
- AC or DC Coupled Input
- AC or DC Coupled Output
- Single Power Supply: 2.7V to 5.5V
- MSOP8 Package
- Low Power Dissipation, Operating Current: 36mA

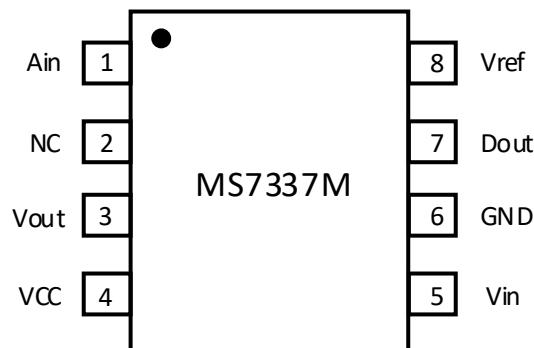

### APPLICATIONS

- Consumer Video
- Portable and Handheld Product
- AHD/TVI/CVI Analog HD Video Driver and Reverse Control Decoder

## ABSOLUTE MAXIMUM RATINGS

Any exceeding absolute maximum rating application causes permanent damage to device. Because long-time absolute operation state affects device reliability. Absolute ratings just conclude from a series of extreme tests. It doesn't represent chip can operate normally in these extreme conditions.

## TYPICAL CHARACTERISTICS CURVE

## FUNCTIONAL DESCRIPTION

The MS7337M operates from a single +2.7V to +5.5V power supply. In application, the MS7337M is a fully integrated solution for filtering and buffering HD video signals and reverse control decoder. The MS7337M's solution can save PCB size and cost, and it can also improve video signal performance compared with traditional design using discrete components.

The MS7337M integrates a DC-coupled input buffer, a video encoder to eliminate out-of-band noise, a gain of +6dB OPA driver to drive  $75\Omega$  load and a coaxial video control decoder. The AC or DC-coupled input buffer can eliminate sync crush, droop and field tilt. The output of the MS7337M can also be DC-coupled or AC-coupled.

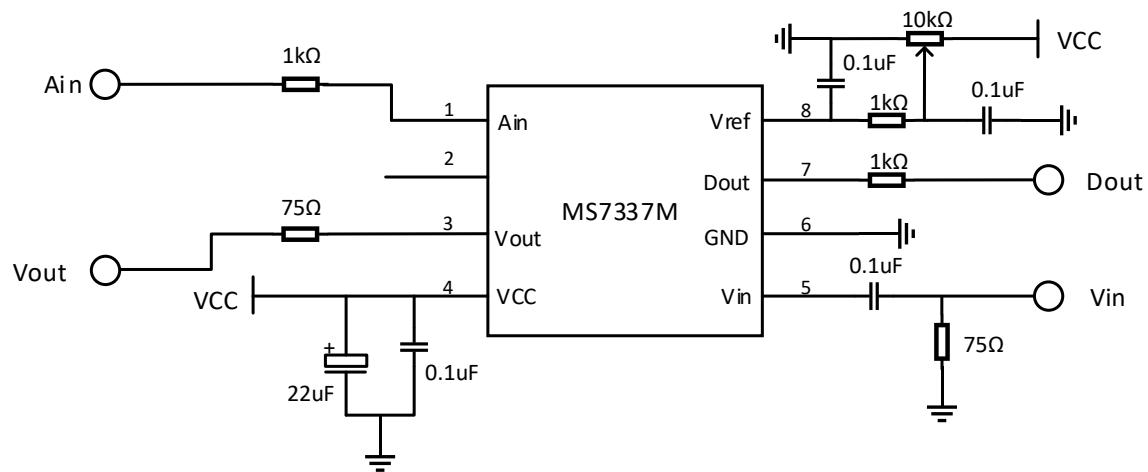

### Power Supply Bypass and Layout

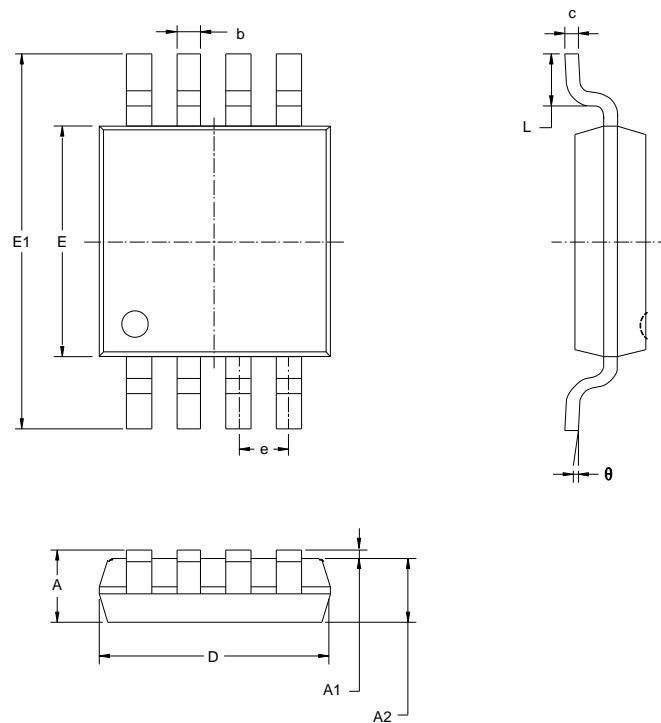

Appropriate power supply bypassing is very important for optimizing video performance in design. Both a  $0.1\mu F$  and a  $22\mu F$  capacitor are always used to bypass VCC pin of the MS7337M. Please place these two capacitors as close to the output pin of the MS7337M as possible. A large ground plane is also needed to ensure optimum performance. The input and output termination resistors should be placed as close to the related pin of the MS7337M as possible in order to avoid performance degradation.

The PCB traces at the output terminal has  $75\Omega$  resistance in order to match  $75\Omega$  characteristic impedance cable. In design, please keep the board traces at the input and output of the MS7337M as short as possible to minimize the parasitic stray capacitance and noise.

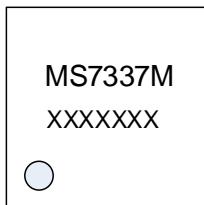

A  $0.1\mu F$  capacitor is used to stabilize reference voltage to reduce external interference.

**STATEMENT**

- All Revision Rights of Datasheets Reserved for Ruimeng. Don't release additional notice.  
Customer should get latest version information and verify the integrity before placing order.
- When using Ruimeng products to design and produce, purchaser has the responsibility to observe safety standard and adopt corresponding precautions, in order to avoid personal injury and property loss caused by potential failure risk.
- The process of improving product is endless. And our company would sincerely provide more excellent product for customer.

### MOS CIRCUIT OPERATION PRECAUTIONS

Static electricity can be generated in many places. The following precautions can be taken to effectively prevent the damage of MOS circuit caused by electrostatic discharge:

1. The operator shall ground through the anti-static wristband.
2. The equipment shell must be grounded.
3. The tools used in the assembly process must be grounded.
4. Must use conductor packaging or anti-static materials packaging or transportation.
